|    LIKELY HALLUCINATIONS (1 found)                               |
+--------------------------------------------------------------+

   #1: GPT-4 has approximately 175 billion parameters.
     Confidence: 70.0%
     Discrepancies:

       The claim states that GPT-4 has approximately 175
       billion parameters, but the evidence does not mention
       GPT-4 or its parameter count.
     Reason:
       The claim states that GPT-4 has approximately 175
       billion parameters. However, none of the provided
       evidence mentions GPT-4 or its parameter count. Source 1
       discusses GPT-2 and its parameter count (1.

+--------------------------------------------------------------+
|   VERIFIED CLAIMS (3 confirmed)                               |
+--------------------------------------------------------------+

   #1:
       An LLM is a machine learning model primarily designed for
       natural language processing tasks such as understanding and
       generating human language.
     Confidence: 95.0%
     Sources: Large language model, LLM-as-a-Judge

   #2:
       These models are typically pre-trained on vast amounts of
       text data, including books, articles, and web content.
     Confidence: 70.0%
     Sources: Large language model, Generative pre-trained transformer

   #3:
       This extensive training allows LLMs to perform various NLP
       tasks like translation, summarization, question answering,
       and creative writing.
     Confidence: 70.0%

|  ANNOTATED ANSWER                                            |
|   = Supported   = Contradicted   = Insufficient Evidence |
|   = Unverified / no matching claim                          |
+--------------------------------------------------------------+

   An LLM is a machine learning model primarily designed for natural language processing tasks such as understanding a
   These models are typically pre-trained on vast amounts of text data, including books, articles, and web content.
   For example, GPT-4 has approximately 175 billion parameters (2).
   This extensive training allows LLMs to perform various NLP tasks like translation, summarization, question answerin
   However, training an LLM often requires significant computational resources, sometimes spanning multiple years due
   Additionally, some implementations of LLMs necessitate specialized hardware for efficient operation.
