

Query: "What is an LLM?"
Generated: 2026-08-14 19:06:48

OVERALL VERDICT		
MOSTLY_UNVERIFIED		
Hallucination Score: 0.627 / 1.000		
Risk Level: MEDIUM		

CLAIM BREAKDOWN		
Total Claims Analyzed: 4		
Supported:	2	(50.0%)
Contradicted:	1	(25.0%)
Unverifiable:	0	(0.0%)
Insufficient Evidence:	1	(25.0%)

LIKELY HALLUCINATIONS (1 found)	
---------------------------------	--

#1: GPT-3 has approximately 17 billion parameters.
Confidence: 70.0%
Discrepancies:

Claim states 17 billion parameters. Evidence does not provide a specific number of parameters.
Reason:
Claim states GPT-3 has approximately 17 billion parameters. Evidence does not provide a specific number of parameters for GPT-3, only stating that it is a large language model (LLM). No date mismatch

VERIFIED CLAIMS (2 confirmed)		
-------------------------------	--	--

#1:
Large Language Models are advanced AI systems designed to perform complex language tasks beyond basic text generation.
Confidence: 90.0%
Sources: Large language model, Generative AI

#2:
GPT-3, developed by OpenAI in 2020, showcases abilities such as zero-shot learning without specific training for those tasks.
Confidence: 70.0%
Sources: GPT-3, Products and applications of OpenAI

ANNOTATED ANSWER		
= Supported	= Contradicted	= Unverified

Large Language Models (LLMs) are advanced AI systems designed to perform complex language tasks beyond basic text g

These models utilize neural networks with billions of parameters to process and generate coherent text from massive
Examples like GPT-3, developed by OpenAI in 2020 with approximately 17 billion parameters, showcase abilities such
LLMs are characterized by their scalability in requiring substantial computational resources including memory and p
